Solitons of the Mean Curvature Flow

Ανδρέας Σάββας-Χαλιλάι

Institute of Differential Geometry, Universität Hannover, Germany

The classification of singularities of Geometric Evolution Equations has attracted the attention of many researchers in the last years and has become one of the most important problems of the field of Geometric Analysis. In this talk I will give a short overview of Singularity Theory and will present some recent results, obtained in a joint work with Francisco Martin (Granada) and Knut Smoczyk (Hannover), related to the singularity theory of the Mean Curvature Flow.
